THE NRCB POSTS ITS QUARTERLY REPORTS AT

WWW.NRCB.GOV.AB.CA

We work to ensure the development of Alberta's natural resources occurs in a socially, economically and environmentally responsible manner.

WHO WE ARE

The Natural Resources Conservation Board (NRCB) is a provincial, quasi-judicial regulatory agency for Alberta's natural resource and confined feeding industries. We are 43 individuals working in six locations throughout Alberta.

WHAT WE DO

The NRCB has been given numerous responsibilities relating to the regulation of very different industries in Alberta. These are outlined in two separate pieces of legislation. On the one hand, the Natural Resources Conservation Board Act (NRCBA) guides the NRCB in its decision-making role with respect to non-energy natural resource developments, while the Agricultural Operation Practices Act (AOPA) guides the NRCB in its work as Alberta's confined feeding industry regulator. NRCB activities fall into three main areas – project assessment and approval, compliance and enforcement, and Board reviews and hearings.

MAKING DECISIONS IN THE PUBLIC INTEREST

In all areas, we have a duty to ensure that decisions we make are "in the public interest." Making decisions in the public interest means impartially considering economic, social and environmental impacts of proposed developments, ensuring impacts are mitigated to the greatest degree possible, and balancing these elements to arrive at decisions in Albertans' best interests.

Albertans can rely on the NRCB to be accountable, transparent, fair and effective while bringing balance to its decision-making role.

NATURAL RESOURCES CONSERVATION MANDATE

We were established as a regulatory agency in 1991 through the Natural Resources Conservation Board Act. Since then we have reviewed numerous proposed developments affecting Alberta's non-energy natural resources. A number of NRCB-approved developments have become a significant part of the environmental, economic and social landscape of Alberta. These include forestry, large recreational and tourism projects, mines and water management projects.

AGRICULTURAL OPERATION PRACTICES MANDATE

In 2002, through the Agricultural Operation Practices Act (AOPA) we began to regulate Alberta's confined feeding industry. We have worked hard to establish a regulatory framework for this industry, building on our regulatory expertise with non-energy resource development and adding knowledge from the agricultural sector.

ALBERTANS CAN LOOK TO THE NRCB FOR

- a forum to examine economic, social and environmental impacts of resource development;
- an opportunity for directly affected individuals and/or communities to be heard;
- compliance and monitoring of the livestock industry; and
- public safety and environmental protection with respect to the livestock industry and major non-energy resource developments.

ACCOUNTABLE

BUILDING CONFIDENCE TAKES TIME AND CONSISTENT EFFORT;

WE BELIEVE A WELL-MANAGED REGULATORY

FRAMEWORK WILL SERVE TO PROTECT AND SUSTAIN

ALBERTA'S NATURAL RESOURCES AND ALBERTANS' INTERESTS.

To Albertans,

Over the past year, I have been fortunate to lead an organization whose employees, everyday, are working in Albertans' interests - an organization of highly skilled individuals dedicated to their roles in ensuring resource development is sustainable and the public interest is protected.

Together, we're working to enhance the regulatory framework to ensure an effective, fair system that meets the needs of stakeholders, so that Albertans will be confident in how the province's natural resources and confined feeding industries are developed and managed.

This document gives readers an idea of the NRCB's activities over the past year and its role in Alberta's resource development future. Thank you for taking the time to find out more about us.

Brady D. Whittaker,
Chairman

ACCOUNTABLE

BUILDING CONFIDENCE TAKES TIME AND CONSISTENT EFFORT;

WE BELIEVE A WELL-MANAGED REGULATORY

FRAMEWORK WILL SERVE TO PROTECT AND SUSTAIN

ALBERTA'S NATURAL RESOURCES AND ALBERTANS' INTERESTS.

A close-up photograph of several green grass blades. The blades are covered in numerous small, clear water droplets, which are in sharp focus. The background is a soft, out-of-focus green, creating a sense of depth. The lighting is bright, highlighting the texture of the grass and the glistening surface of the water.

CREDIBLE

ENSURING ALL DEVELOPMENTS ARE THOROUGHLY REVIEWED
AND ALL ELEMENTS OF THE PUBLIC INTEREST ARE CONSIDERED

154 AOPA applications received

111 AOPA decisions issued

"AT FIRST GLANCE THE PROCESS AND ITS REQUIREMENTS MAY SEEM A LITTLE ONEROUS, BUT OPERATORS NEED TO KEEP IN MIND THAT THEY WILL LIKELY ONLY APPLY ONCE OR TWICE TO THE NRCB FOR A PERMIT DURING THE LIFE OF THEIR OPERATION; SO BEING AS THOROUGH AS POSSIBLE AND GETTING IT RIGHT FROM THE START IS IMPORTANT."

Approval Officer / Red Deer
SANDI ROBERTS

On any given day, the NRCB's Approval Officers work to ensure that the application process for livestock operators is well understood, efficient, and applications are technically complete.

MEETING THE STANDARDS

For a review of an application, an Approval Officer will assess various technical aspects of a proposed development including: protection of groundwater and the water-table, surface water control systems, natural water and well requirements, manure storage and application, and nutrient management. NRCB Approval Officers have expert understanding of engineering and design requirements. For specialized technical support, an Approval Officer may involve other experts on staff with the NRCB, such as a hydrogeologist or a soils specialist.

Applicants need to be aware that generally they are required to engage the services of third party consultants and professionals in order to supply technical reports and other data to address the requirements of the regulations.

"Today more livestock operators are aware of the increased technical requirements that an application to the NRCB entails, in contrast to what they were used to under the system of municipal permits," says Kai Ma, Approval Officer, Lethbridge. "Over the past two years we have strived not only to educate operators, but to improve the process for collecting information so that decisions are made more efficiently."

LISTENING TO CONCERNS

The NRCB encourages applicants to consult with parties who may be potentially affected by their proposed development. Early involvement and communication with neighbours, community residents and municipalities may lead to a greater understanding of each other's interests and a smoother process for all.

LAND USE ISSUES

Municipal governments are no longer responsible for issuing confined feeding operation (CFO) development permits, but are encouraged to provide input on specific applications and to develop land use plans that identify where new and expanding CFOs would not be compatible with current or future land uses.

Approval Officers are required by legislation to deal with issues raised by municipalities and various potentially affected parties. In all applications, regardless of size, municipalities are deemed to be directly affected and Approval Officers must seek their input in any development within their boundaries. When reviewing an application, Approval Officers are concerned with ensuring that it meets the municipality's land use zoning plans.

NEW DIRECTLY AFFECTED PARTY STATUS FOR REGISTRATIONS

As a result of recent amendments to AOPA, applications for registrations (smaller size applications) will require the NRCB to notify individuals and landowners located within one-half mile or within the minimum distance of separation (MDS) – whichever is greater – of a proposed facility. Prior to this change, only the applicant and the municipality were deemed to be directly affected.

Operations that are smaller than registration-size, that do not require a permit from the NRCB, may be regulated by municipalities through land use bylaws. Regardless of size, the NRCB will respond to issues arising from a facility where there may be a risk to the environment.

19 enforcement orders issued

WHAT IS AN OFFENCE UNDER AOPA?

Livestock operators should be aware that certain actions constitute offences under AOPA and its regulations. Non-compliance with AOPA or the regulations leaves an operator open to enforcement consequences.

Offences include non-compliance with an NRCB approval, registration, authorization or (municipal) permit; construction or expansion of a CFO without an approval or registration; construction, expansion or modification of a manure storage facility without an approval, registration or authorization; failure to apply manure in accordance with the regulations and failure to maintain accurate records.

An Inspector has various tools available to deal with offences including Enforcement Orders, Court of Queen's Bench Orders and Court fines which can reach \$10,000 per day/per offence.

TECHNICAL GUIDELINES

In 2004, the NRCB is set to release a new series of Technical Guidelines intended to assist operators by communicating in greater detail what is expected of them with regards to specific requirements, such as leak detection and monitoring. They are intended to provide further clarification and direction regarding the practical and technical aspects of implementing AOPA and its regulations.

CREATING AWARENESS OF THE RULES

As part of their duties, NRCB Inspectors have played a key role in educating operators about their responsibilities under AOPA. In many instances, an Inspector visits an operation in response to a complaint and uses the opportunity to educate the operator, allowing the operator to voluntarily comply.

NRCB staff also work to raise awareness of the role and responsibility of the NRCB as regulator of Alberta's livestock industry, and the expectations of operators with respect to environmental safety and manure management practices outlined in AOPA.

This educational component of the NRCB's work with industry continues. And, in moving beyond the introductory phase of its first two years of operation, the NRCB's compliance and enforcement focus is expanding to include the use of escalating consequences where appropriate.

FOCUSED ON ONGOING MONITORING

Since January 2002, when AOPA first came into effect, NRCB Inspectors focused much of their time on responding to and resolving complaints received by the NRCB about livestock operations.

"In our first two years of operation, we have been largely complaint-driven, which has served us well as the new player in the process, with new rules," says Frank DeGroot, Inspector, Lethbridge Office. During this time, the NRCB has been able to resolve 92% of the 2,239 complaints received, through the hard work of nine Inspectors in four regional offices. Moving forward, much of an Inspector's time will be spent in the ongoing monitoring of CFOs, whether they were approved by the NRCB or previously under the municipal system. NRCB Inspectors will continue to respond to complaints received, but as a team they will be very focused on ongoing monitoring of CFOs, to ensure they are meeting their permit conditions.

NEW ENFORCEMENT TOOL

With the amendments to AOPA passed in June 2004 comes a new tool for NRCB Inspectors. The NRCB now has the authority to take immediate action if a situation poses an environmental risk. An emergency order allows the NRCB to take corrective action and recover costs if an enforcement order is not complied with or if the situation poses an immediate environmental risk.

FAIR

TWO DISTINCT MANDATES; ONE COMMON GOAL

UNDER AOPA AND NRCBA, THE NRCB CONDUCTS
A FAIR AND OPEN PROCESS FOR THE REVIEW OF PROPOSED PROJECTS
AFFECTING ALBERTA'S NATURAL RESOURCES.

111 decisions issued

Requested to review
22 of 111 decisions

11 reviews/hearings held in
2003/2004

Under the Agricultural Operation Practices Act and the Natural Resources Conservation Board Act, the Board's responsibility is to conduct a fair and open process for the review of proposed projects affecting Alberta's non-energy resources and confined feeding industries.

NRCB hearings provide a public forum for presentation and testing of a project's environmental, social and economic evidence. Reviews typically take the form of a public hearing, although the NRCB may use mediation, written proceedings or meetings to resolve concerns and allow the Board to gather evidence in arriving at its decision. Public hearings are conducted by a panel of the Board (usually three Members and/or Acting Members).

Major natural resource project hearings generally involve a greater amount of complex scientific and technical information which may require a week or more of hearing time. On average, review hearings of agricultural operations are finalized in one to two days.

KEY HIGHLIGHTS OF AN NRCBA REVIEW

Since 1991, the NRCB has reviewed major non-energy natural resource developments such as pulp mills, large recreational and tourism projects, mines and water management projects. During this time, the Board has assessed proposals for 14 large-scale developments.

The public hearing process for a development proposed under the NRCBA is formal and quasi-judicial in nature. It ensures hearing participants have the opportunity to intervene and have their concerns considered.

The hearing follows a set procedure that includes opening remarks, discussion of procedural or legal matters (preliminary matters), submissions (including questioning of witnesses by other participants, NRCB staff and the Board), rebuttal by the applicant and final arguments.

Public participation is a critical component of an NRCBA review and helps ensure that the Board has access to relevant and reliable information from different perspectives to determine if a project is in the public interest. Individual members of the public, organized public interest groups and federal, provincial and municipal representatives are allowed to make representations to the Board and to examine evidence presented by other parties.

Currently two applications are before the Board; one deals with the proposed expansion of Agrium Product Inc.'s phosphogypsum storage area near Fort Saskatchewan; and the other involves a proposed limestone quarry development near Fort McMurray.

In February/March, 2004, the Board held an extensive public hearing over eight days regarding Agrium's application.

KEY HIGHLIGHTS OF AN AOPA REVIEW

AOPA reviews are triggered when either an applicant or a directly affected party requests the Board review an Approval Officer's decision (or an operator requests a review of an enforcement order issued by an Inspector).

AOPA protects the rights of directly affected parties by allowing them the opportunity to request a Board review of any decision on an AOPA application. Directly affected parties have 10 working days to request a Board review by submitting a "request for review" stating the merits of issues they feel were inadequately considered by an Approval Officer. If no request for review is received in the allotted time, the original decision stands.

Similar to NRCBA reviews, AOPA reviews are formal and quasi-judicial in nature. Directly affected parties have the opportunity to intervene and have their concerns heard. Hearings are held in the community closest to the proposed livestock development.

In 2003/04, NRCB Approval Officers issued 111 decisions related to agricultural operations and the Board received requests to review 22 of them. Of these requests, the Board granted and held 10 AOPA reviews.

**AOPA PROTECTS THE RIGHTS OF DIRECTLY AFFECTED PARTIES
BY ALLOWING THEM THE OPPORTUNITY TO
REQUEST A BOARD REVIEW OF ANY DECISION.**

RESOLVING CONCERNS AT AN EARLY STAGE

The NRCB encourages all applicants, whether livestock operators or those applying under the NRCBA, to be proactive at the initial planning stages of a proposed new development or expansion by being consultative and open with the community and directly affected parties about their plans. Early and constructive communication efforts on the part of applicants to address outstanding issues or concerns will not only streamline the application process, but also strengthen community relationships post-decision.
